PRODUCT SPECIFICATION

## 1. SCOPE :

This specification covers the pitch 0.5 mm ZIF FPC connector series.
2. PRODUCT NAME AND PART NUMBER :

| Product Name | E\&T Part Number |
| :---: | :---: |
| 0.50 mm ZIF FPC Connector, R/A, SMT <br> Type Bottom Contact | 6712K-XXXX-XXX |

3. RATINGS :

| Item | Standard |  |
| :---: | :---: | :---: |
| Rated Voltage (MAX.) | 50 V | DC |
| Rated Current (MAX.) | 0.5 A |  |
| Operating Temperature Range | $-40^{\circ} \mathrm{C} \sim+85^{\circ} \mathrm{C}$ |  |

*Including terminal temperature rise

## 4.PERFORMANCE :

## 4-1 Electrical Performance

## 5.INFRARED REFLOW CONDITION

1) Ascending time to preheating temperature $170^{\circ} \mathrm{C}$ shall be 40 seconds minimum.
2) Preheating shall be fixed at $160 \ldots 180^{\circ} \mathrm{C}$ for $60 \ldots 90$ seconds.
3) Heating shall be fixed at $220^{\circ} \mathrm{C}$ for $50 \ldots 60$ seconds.
4) At $260 \pm 5^{\circ} \mathrm{C}$ peak shall be 10 seconds maximum.

## FPC /FFC Connector Front Flip Lock Type Handling Precautions

This manual is to describe basic precautions. When there are doubtful points in use of, please contact E\&T.

## 1. Common Handling Precautions

- Do not expose E\&T's ZIF FPC/FFC connector, processing process product and processing product to corrosive substance, corrosive gas, high temperature and high humidity and direct sunshine. It causes corrosion of contact and deterioration of insulation performance of housing, etc., so that it causes motion defect of appliances.
- Do not apply external load to E\&T's ZIF FPC/FFC connector, processing process product and processing product. Deformation and breakage, etc. occur, and it causes performance defect of.
- There may be slight differences in the housing coloring, but there will be no influence on the product's performance.
- Please add a stiffener on the flexible printed circuit (FPC/FFC) when you mount the connector onto FPC in order to prevent deformation of the FPC/FFC.
- Please do not conduct any "washing process" on the connector because it may damage the product's function.

## 2. PC Board Precautions

- Exercise caution when handling boards with the connectors installed. Do not apply any forces affecting soldered joints. (see figure 1).
- The mounting specification for coplanarity does not include the influence of warpage of the printed circuit board. (see figure 1).

Figure 1.

## 3. Operation

FPC/FFC Insertion Procedure.

- 1) Connector installed on the board.

Lift up the actuator(Lock). Use thumb or index finger. (see figure 2).

Figure 2.

- 2) Assure that the FPC/FFC is fully inserted parallel to mounting surface, with the exposed conductive traces facing down. (see figure 3).

Figure 3.

- 3) Rotate down the actuator(Lock) until firmly closed. It is critical that the inserted FPC is not moved and remains fully inserted. Should the FPC be moved, open the actuator(Lock) and repeat the process, starting with Step 1(see figure 4).

Figure 4.

## FPC/FFC Removal.

1) Lift up the actuator(Lock). Carefully withdraw the FPC/FFC. (see figure 5).

## 4. Precautions When Inserting or Withdrawal FPC/FFC

- FPC/FFC to be insertion and withdrawal at an angle of about $15^{\circ}$, and the FPC/FFC should be inserted firmly all the way to the back. (see figure 6).

Figure 6.

- Do not apply excessive force or use any type of tool to operate the actuator(Lock).
- When locking the actuator(Lock), please make sure that the actuator is entirely closed by pressing on the entire actuator. Pushing the one specific point of the actuator may cause the actuator to be detached or damaged. When locking the longer actuator(Lock), please use two points to put pressure on locking. (see figure 7).

Figure 7.

- The connector will assure reliable performance when the actuator is open to an angle (please refer to drawing) maximum. Do not exceed this angle, as this may cause permanent damage to the connector. (see figure 8)
- Avoid grasping the actuator(Lock) with two fingers or lifting the actuator(Lock) with fingernail. (see figure 8)
- Do not apply force in the direction of arrows. Doing this may cause the actuator to be detached or damaged. (see figure 8).

- When inserting the FPC/FFC, do not forcefully rub against the surface beneath the connector insertion slot. Doing so will result in the FPC/FFC forcefully striking the contacts and this will cause contact deformation, peeling of the FPC/FFC conductors, and other irregularities. (see figure 9).

Figure 9.

- Do not apply any forces affecting soldered joints. Do not apply upward pull-force to the FPC/FFC close to the connector. (see figure 10).
- If necessary, please fix the FPC/FFC directly on the chassis. Also, please avoid pulling the FPC/FFC vertically or twisting the FPC back and force horizontally while it is inserted in the connector(see figure 10).
- Forming processing is conducted to FPC so as not to load force to connector. (see figure 10).
